Project: Watercorp Pump Platform

Client: Watercorp
Contractor: Roam Marine
Year: 2010
Contract period: 2 months

Project scope:

Construction of a pile supported deck and associated pipework on the north end of the Mermaid Marine wharf in Dampier.

Roam scope:

Roam was responsible for all construction works including provision of all labour, plant, consumables, temporary works and HSE requirements. Piling gates were installed and the piles driven with a BSP5t hammer. An access platform was erected to enable drilling and grouting anchors into the bedrock. The steel deck was assembled and erected. Two pump casings were suspended from the deck and braced to the wharf with diver installed bracing. Pipe spools were site fit, welded, painted and installed.

Works were complete on time and budget with no lost time injuries or QA issues.
