Project: Elizabeth Quay Footbridge Piers

Client: Leighton

Contractor: DASSH

Year: 2014/2015

Project scope: Reinforcement set out, schedule, temporary works, construction support

Each face angle and set out was different in the three piers. All Stainless Steel reinforcement was modelled to detect clashes and schedule.

Temporary jigs were designed to set out starter bar angle and spacing to assist speedy constructability.

Temporary jigs were also designed to construct main reinforcement cages off site then lift over starter bars.
